

## **RSL updated per August 2023**

### **General Requirements for all materials**

Eurosko Norge AS sells products in Scandinavia. All suppliers to Eurosko Norge AS must be in compliance with regulations in all markets we operate.

### **List of Chemical Substances Compliance**

All suppliers to Eurosko Norge AS must keep record of all chemical substances used in production and all associated processes. This list shall include name of the chemical product, the purpose/area of use and a reference to a Material Safety Data Sheet (MSDS).

Suppliers can and will be asked to submit this list to CSR or an accredited auditor for inspection. The buying and product departments reserve the right to ask for additional documentation, showing the chemicals that have been used during production.

### **Follow up routines**

The standards described in this document are applicable on all orders at all times, valid from the time of written confirmation.

**Test methods** – Tests according to the latest published European standard (EN) and/or ISO test methods.

In case there is no EN and/or ISO standard available *«not yet available»* the laboratory used by Euro Norge AS, the checklist for lab should be used to ensure the quality of the lab that is used by us.

In case of differing test result, the test performed by Eurosko Norge AS will be valid.

In case of quality dispute; 3rd party documentation will be required. 3rd party test results will not be required unless requested.

### **General requirement for Chemicals of Concern (CoC)**

Substances hazard classified as persistent, bioaccumulative and toxic (**PBT**), very persistent and very bioaccumulative (**vPvB**), persistent, mobile and toxic (**PMT**), carcinogenic, mutagenic and toxic for reproduction (**CMR**), endocrine disruptors (**ED**) or equivalent concern must not be present in Eurosko Norge AS products.

## **LEGAL BACKGROUND**

### **UN global treaties on certain hazardous chemicals such as Persistent Organic Pollutants (POPs)**

#### **UN global treaties on certain hazardous chemicals such as POPs**

Stockholm Convention on Persistent Organic Pollutants is an international environmental treaty, signed in 2001 and effective from May 2004, that aims to eliminate or restrict the production and use of persistent organic pollutants (POPs).

The Rotterdam Convention (formally, the Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade) is a multilateral treaty to promote shared responsibilities in relation to importation of hazardous chemicals.

The Minamata Convention on Mercury is a global treaty to protect human health and the

environment from the adverse effects of mercury.

### **EU/EEA chemicals regulations**

There is a range of chemicals regulations in EU/EEA that cover requirements of articles and/or chemical products depending on to what extent certain hazardous chemicals pose possible unacceptable risk to users and the environment under normal foreseeable conditions/use.

### **Such regulatory frame works are**

- REACH (EU Regulation 1907/2006) and related amendments
- EU POP regulation (EU Regulation 850/2004 and 519/2012) and related amendments
- Biocide Product regulation (EU Regulation 528/2012) and related amendments.
- EU directive concerning packaging materials (94/62/EC) and related amendments.
- RoHS Directive (2011/65 / EU) restricting the presence of hazardous chemical substances in electrical and electronic equipment.

### **Restrictions (EU/EEA)**

Restrictions are regulatory measures to protect human health and the environment from unacceptable risks posed by chemicals. Restrictions may limit or ban the manufacture, placing on the market or use of a substance. A restriction can apply to any substance on its own, in a mixture or in an article, including those that do not require registration. Restrictions setting out conditions for the placing on the market of substances apply to both domestic production and imports.

### **Duty to inform your customer on substances for authorisation (EU/EEA)**

Substances of Very High Concern (SVHC) are listed on Candidate List for authorization of the Regulation (EC) No 1907/2006 (REACH). All professional actors have an obligation to inform their consumers about the content of SVHC (as a minimum the name of the substance(s)) exceeding 0.1 % weight by weight (= 1000 mg/kg) in individual parts of an article, that are defined as articles. If the consumers are professional actors, there is an immediate information duty, but within 45 days for private consumers.

### **List of Regulated Substances**

**Table 1** provides a non product specific overview of material relevant regulated chemicals for their possible occurrence in different materials.

**Table 2** is an extensive list of hazardous and often regulated chemicals in EU/EEA and USA, with relevance to materials used in Eurosko Norges AS products. It provides

- Latest published CEN/ISO test methods for textiles, leather and footwear
- Suggestions for NN company limits to be applied in value chains depending on the NN chemicals policy
- Legal status e.g SVHC, restricted etc

### **Definitions in table 2**

**CAS RN** - For every substance, the list states the identification number (CAS No) according to Chemical AbstractServices

**Several** – Is stated instead of CAS number, the substance has several substances and CAS numbers covered by the specification.

In case there is a defined range of regulated substances, these are listed in annexes, 1 to 13.

**Detection Limit** - Is defined as the lowest possible value that can be found during testing with a specific testmethod. Whenever test methods have been revised and the detection limit has been changed, the new detection limit must be followed.

The limits of detection (LOD) and quantification (LOQ) are defined as the lowest concentration of the analyte that can be reliably detected and quantified, respectively. Usually the LOD and LOQ refer to the limits associated with 95% probability of obtaining a correct result.

**Not Detected** - Substance stated with “Not Detected” as a requirement should not be found above the Detection Limit to be reflected in test reports.

**Usage ban** - When a substance is defined as “Usage ban” this means that the substance should not be present and used during production directly or indirectly through transformation in processes. Those substances cannot be present in the product over the Detection Limit.

**Restricted** means restricted according to EU/EEA harmonised chemicals regulations.

**SVHC** means Substances of Very High Concern (SVHC) that are listed on Candidate List for authorization of the Regulation (EC) No 1907/2006 (REACH).

**Limit value** – Limit values are based on the highest allowed content of the substance per kilogram article or part thereof.

**Not yet available** - For those chemicals that have no official standard testing method report the method used by the laboratories through **Annex 14 Checklist for laboratories** to answer .

**TSCA** (US Federal Toxic Substances Control Act) of existing chemicals

**Prop 65** means that the substance is listed in the Californian Proposition 65.

## Annex 9 – legal status formaldehyde

**Formaldehyde regulations within EU/EEA are replaced by EU REACH Regulation annex XVII entry 72 for textiles.**

Formaldehyde regulations outside EU/EEA		
Country	Regulations/Requirements	Objection Limit / Limit
China	Limits of Formaldehyde Content in Textiles: GB18401, Leather: GB/T 19941	Textiles for infants and babies: $\leq 20$ mg/kg. Textiles in direct skin contact: $\leq 75$ mg/kg. Textiles not in direct skin contact: $\leq 300$ mg/kg.
Japan	Japanese Law 112 Textiles: JIS L1041	Textiles for infants: Not detectable. Textiles in direct skin contact: 75 ppm.
Vietnam	Circular no 23/2016/TT-BCT	Textiles for babies under 36 months: 30 mg/kg. Textiles in direct skin contact: 75 mg/kg. Textiles not in direct skin contact: 300 mg/kg
USA	Federal Hazardous Substances Act (FHSA)	The Federal Hazardous Substances Act (FHSA) is a chemicals legislation that does not focus on products but regulates certain hazardous substances in products, such as lead in candle wicks and solvents in shoe waxes. Consumer products containing more than 1% formaldehyde must be labeled with a warning. The following states have restrictions of formaldehyde: California (cleaning products, cosmetics, wood products), Illinois, Iowa, Louisiana, Massachusetts (children's products, jewelry, toys), New Hampshire (children's products, toys), New York (electronics equipment), South Carolina and Vermont (chemical products).
Eurasian Customs Union (Armenia, Belarus, Kazakhstan, Kyrgyzstan and Russia)	Technical Regulation on the, TP TC 007/2011 On "Safety of Products intended for children and adolescents", enacted in 2011 and its amendment "Decision N° 51 (28 April 2017)", enacted in 2017. "TP TC 017/2011 On Safety of Light Industry Products enacted in 2011 and its amendment "Decision N° 60 (9 August 2016)" enacted in 2016. GOST 30386-95 (Textiles. Maximum permissible concentrations of free formaldehyde)	Mass fraction of free Formaldehyde babies up to 36 months: 20 mcg/g for 1st and 2nd layer of products and 300 mcg/g for 3rd layer.  Mass fraction of free Formaldehyde for children and adolescents: 75 mcg/g for 1st and 2nd layer of products and 300 mcg/g for 3rd layer.  <i>Apply less than 20 mg free formaldehyde/kg as a customs requirement.</i>

## **Annex 14 - Checklist for laboratories**

### **Introduction**

This routine is to ensure qualified chemical test protocols and test results by selected and by NN, approved accredited independent test laboratories in selected countries of concern.

If there are published EN or EN ISO or ISO methods available always use that method and clearly report in the test protocol

If other methods are used e.g. in-house test methods, always answer carefully each section below.

In case the applied EN, EN ISO or ISO method is modified by the test laboratory, always report these modified procedures in the test report.

All test reports should be signed by an authorised person at the laboratory.

### **Testing**

For those chemical substances to be tested, where no official international standard test method exists, the test report should include the following:

#### **Sample preparation**

- Amount of specimen for preparation, weight and size
- procedure of extraction, solvents used, and equipment used for extraction e.g. Soxhlet

#### **Instrumental performance**

- instrument used e.g GC-MS etc.
- lab specific detection limit(s) where preferably LOQ (limit of quantification) are reported
- standard deviation in analytical results

#### **Other information of importance**

- describe modified procedures from applied established ISO/EN standard methods if available.
- always present test results in mg/kg
- description of the recalculation from mg/kg if the test result is presented in another unit e.g ppm, ppb, ug/kg etc

#### **Instruction to the laboratory**

- always present the actual test result of the analysis and not any letter combinations if not properly described e.g N/A
- if not detected, report always below the actual LOQ (< LOQ) values
